

Make your own Water Cycle

You will need:

- See-through food bag that can be sealed
- Water
- Food colouring
- Permanent marker

Gather all your materials and add a few drops of food colouring to your water

Draw the stages of the water cycle on your bag (see our water cycle factsheet for more information) - be as detailed as you like

Pour your water into the bag, seal it up and then put it in a place that gets some sunlight (this one is sellotaped to the window)

Watch as the water begins to evaporate and condense within the bag, finally coming back down as precipitation. Well done!
